WORK EXPERIENCE

Remotask - Freelance Data Annotator & AI Trainer | Remote

Nov 2020 - June 2021

- Annotated images and evaluated AI chatbot responses by drawing precise bounding boxes and identifying semantic errors to directly improve dataset quality for computer vision and conversational AI models.
 - Transcribed audio clips and managed independent workflows to transform raw sound files into exact text datasets for voice-recognition software while consistently meeting platform accuracy goals and deadlines.
-

PROJECTS

Jan 2026 - May 2026

ThreatTrack: Android-based Crime Reporting System with Hotspot Mapping | Fullstack Developer
React Native, React/Vite, JavaScript, Firebase, Gemini AI, Google Maps API

- **Developed a full-stack platform** featuring a mobile reporting application and a web dashboard, validating real-time data sync with an average latency of under 2 seconds during local network testing.
- **Implemented real-time data handling** with Firebase Auth and Firestore, securely processing concurrent simulated emergency SOS alerts, multimedia uploads, and live GPS coordinates from multiple test devices.
- **Integrated Gemini AI and Firebase Messaging** to automatically generate structured text summaries from raw incident descriptions, successfully eliminating manual report formatting steps for system administrators.

Barangay Equipment Borrowing & Tracking System | Backend Developer

Sept 2025 - Dec 2026

HTML5, CSS3, JavaScript, Firebase, Vercel

- **Designed a real-time Firestore NoSQL schema** and Firebase Auth RBAC system across three distinct dashboards, successfully validating that data permissions were fully isolated per role during testing.
- **Implemented Firestore listeners and calendar logic** to provide instant database updates, ensuring zero overlapping reservation conflicts or overbooking errors across all tested inventory items.
- **Developed automated inventory counters** that dynamically calculate available stock levels in real time while using automated status transitions to archive old records upon reaching event completion timestamps.

Road Rumble: Top-Down Arcade Dodger Game | Co-Developer

Dec 2025 - March 2026

Unity, C#, PlayerPrefs, JSON

- **Implemented a local split-screen versus mode** that secured the People's Choice Award at PLV GameCon 2026, successfully managing independent viewport camera rendering, localized keyboard input mappings, real-time score synchronization, and interactive tactical debuff systems to determine the winning player.
- **Co-developed modular C# gameplay systems** to handle smooth lane-switching mechanics, obstacle collision loops, and weapon power-ups, ensuring zero performance drops during multi-threaded game scenes.
- **Designed a dynamic enemy spawning system** that parses JSON data configs to scale vehicle velocities, maintaining consistent performance when rendering over 20 active obstacles on screen concurrently.

Library Management & Book Recommendation System | Backend Developer

Nov 2025 - Dec 2025

Python, Django REST Framework, SQLite, Scikit-learn, Tkinter

- **Developed the REST API endpoints and JWT login flow** using Django, establishing secure, isolated data access layers and operational permissions for both the student portal and admin dashboard views.
 - **Integrated a recommendation feature using Scikit-learn** (TF-IDF and Cosine Similarity) to analyze library catalog datasets, generating a list of 5 relevant book suggestions instantly based on category matching.
 - **Implemented atomic database transactions** for the backend borrowing framework, completely resolving race conditions and inventory calculation bugs during simulated simultaneous book checkouts.
-

TECHNICAL SKILLS

- **Programming Languages:** Java, C#, Python, JavaScript (ES6+), HTML5, CSS3
 - **Frameworks & Libraries:** Spring Boot, React Native, React, Unity, Vite
 - **Backend & Cloud Services:** Firebase (Firestore, Authentication, Storage, Cloud Functions)
 - **Tools & Platforms:** GitHub, Git, Vercel, MySQL, SQLite, JSON
-

EDUCATION

2023 - Present

Pamantasan ng Lungsod ng Valenzuela - BS Information Technology

3rd Year Student
